Article of Evidence #4: AppFolio's Ruby Fellow

In 2015, Yukihiro "Matz" Matsumoto, the creator of the Ruby language, announced the effort to make Ruby version 3 be three times the speed of Ruby 2.0 (video link: http://confreaks.tv/videos/rubyconf2015-keynote-and-q-a-matz).

AppFolio, Inc. announced that it would hire a full-time engineer to work on Ruby performance to assist with the Ruby 3 effort (source: http://engineering.appfolio.com/appfolio-engineering/2015/11/18/ruby-3x3).

After a search, on June 6, 2016, I was chosen as this engineer. AppFolio publicly announced my hiring here: http://engineering.appfolio.com/appfolio-engineering/2016/6/3/ruby-fellow-hired

Disclosure: I now have edit access to this company web site. As such, I could in theory falsify this evidence. Here is an archive.org link showing that the current form of this article has been in place at least since June 22, 2016: https://web.archive.org/web/20160622215337/http://engineering.appfolio.com/appfolio-engineering/2016/6/3/ruby-fellow-hired
